

AUREON INSTITUTE · PRIVATE EVIDENCE LEDGER

THE GRAIL LEDGER

Master Record — Who, What, Where, When, How.
Four sittings consolidated: the triangulation, the route, the second vessel, the pattern.

Gary Anthony Leckey · Belfast

Compiled 6 October 2026 · from the sittings of 5–6 October 2026

Grades: VHR verified record · DCR documented reconstruction · HYP hypothesis · SPC speculation

How to read this record

Three columns stay apart, as in the sitting ledgers. A **known record** is a document or artifact we can name. A **discovery** is a join those documents will not make, or a limit already stated. A **hypothesis** is the proposed mechanism — recorded because you asked for it; it is not a finding. One instruction governed the whole hunt: no ledger, archive, or system will ever record that the object was taken from its place — history is written by the victors. The evidence pursued here is therefore the route, the pattern, and the paper shadow — never a claimed custody chain. Four verifier versions (v1–v4) passed their checks before this consolidation; this master record passes only if the merge upgrades nothing (v5).

> **The hunt in one paragraph.** The standing hypothesis: the real Grail is a plain stone object from the People of the Threshold, whose stone behaves like Scottish curling-stone granite and whose water restores what fables call health or immortality; the Valencia cup is the false Grail. Four sittings executed every desk-executable test. The Antarctic bed at the frozen coordinate is real ice over a modelled bed no instrument has touched; the curling-stone physics clause inverts the actual property of ailsite; the route north is documented as a system in every era; the second stone vessel of the 1135 act is most plausibly the plain agate foot of the Valencia composite; and the water-stone motif is 4,300 years old and still selling. What remains open is named, with the documents and the people who can close it.

WHO — the people on the corridor

Person	Role in the record	Era	Record	Grade
Pytheas of Massalia	First documented measurer of the northern corridor; Thule "six days north of Britain"; the sea-lung at the ice edge	c. 325 BC	Fragments via Strabo 1.4.2, Pliny NH 4.30, Diodorus 5.21–22, Geminus 6.9	**VHR text**
Hecataeus of Abdera	Author of the island of Apollo's priests — spherical temple, 19-year "year of Meton"	c. 300 BC	via Diodorus Siculus 2.47	**VHR text**
Cormac Ua Liatháin	Curragh voyager — Orkney under royal protection; then 14 days and nights straight north, "beyond the range of human excursion"	c. 590s	Adomnán, Life of Columba 2.42–43 (CELT L201040)	**VHR text**
Columba	Patron of the northern world; his white quartz floated in water cures — and vanishes for the doomed	c. 563–597	Vita Columbae II.33	**VHR text**
Brendan	Literary voyage archetype — told to take precious stones and fruit home when the voyage is finished	text 9th–10th c.	Navigatio Sancti Brendani, Selmer §28	**VHR text**
Dicuil's clerici	eyewitnesses who lived on Thule February–August; found the frozen sea one day's sail beyond	c. 795	Dicuil, Liber de Mensura Orbis Terrae (825)	**VHR**
The papar	Resident priest class along the corridor a century before the Norse — books, bells, croziers; the Papa place-names	to c. 825	Íslendingabók ch. 1; Landnámabók prologue; Papil cross-slab (HES SM2672)	**VHR names/texts**
Earl Harald's party	Sheltered in Orkahaugr in the Christmas snow — the mound the treasure lines name	1153	Orkneyinga saga ch. 93	**VHR**
Ramiro II	Took the two stone vessels from San Juan de la Peña to mint emergency coinage	1135	AHN Clero leg. 444 no. 257; Ubieto 1951 doc. 4	**VHR**
Lope Sangiz, merino of Jaca	Physical handler of the delivery — "qui aduxit illo argento"; the last documented custody of vessel No. 2	1135	same act	**VHR**
Abbot Eximino · Talesa of Béarn	Head of the despoiled house · the north-facing witness	1135	same act	**VHR**
Henry Danet	Irish Templar; the Cyprus→Ireland sea passage is inference only	1308	Nicholson's reading of the trial	**VHR posting / HYP passage**
Jaime II	Wrote to the Mamluk sultan asking for the Cáliz — the crown did not believe San Juan held it	1322	ACA correspondence	**VHR**
The unnamed king	Earlier royal donor behind the "carta del rey" — identity open	pre-1399	ACA reg. 2242 f. 171	**VHR reference**
Martín el Humano	Requested and received the stone chalice from San Juan — the Valencia line begins	1399	ACA perg. 136; regs 2242/2243	**VHR**
John White · Clement Bagot	Julian of Bristol — Lisbon→Ireland hides, the pleaded route	1453	Carus-Wilson, BRS 7; TNA C 1	**VHR**

Ochoa de la Sona	Santa Maria of Caudelars — Bristol→Ireland, £106 cargo	1517	TNA E 122/21/2	**VHR**
Sir Simon Lockhart (legend)	Brought the Lee Penny healing stone from a Saracen emir — the corridor run backward	legend c. 1330; rite doc. 1629+	PSAS 57 (1923)	**HYP legend / VHR rite**
Tim Severin	Sailed the northern arc in a hide boat and lived — the physical proof of the route	1976–77	The Brendan Voyage; survey records	**DCR**
Vicente Pons Alós	Valencia cathedral archivist — route to the mounting-date file that decides the urceus question	present	verified contact (1 Oct pack)	**VHR route**
Gary Anthony Leckey	The investigator; author of the hypothesis and the Threshold papers	present	Zenodo 21529282 / 21529333; this ledger	—

WHAT — the object classes on the board

Class 1 — The documented composite (Valencia)

The Santo Cáliz, Valencia Cathedral, Capilla del Santo Cáliz — the only stone vessel on the board with a live custodian and a continuous paper chain from 1399. Three parts: a banded-agate cup (E. Hellenistic-Roman, c. 100–50 BC; mouth 96.44–97.85 mm, volume 235 ml — UPV 2026 metrology, DOI 10.1016/j.culher.2026.05.016); a gold mount with gems (28 pearls, rubies/garnets, 2 emeralds, documented 1399 onward); and as its **foot, a plain inverted agate/chalcedony vessel**, Islamic (Córdoba/Fatimid, 10th–12th c.), bearing a Kufic inscription *"li-l-Zāhira"* — a Medina Azahara association. The composite left San Juan already composed (1410 inventory, ACA Ms. 136; 1437 deposit act, ACV vol. 3532). **VHR object.** The user's standing clause files this as the false Grail — ornate, mounted, exhibited.

Class 2 — The two stone vessels of the 1135 act

> *"…per illo calice de lapide precioso et per uno urceo similiter de lapide precioso que traxit de sancto Iohanne … per meam monetam facere de Iacha … et ipso die mutavit domnus rex illa moneta in Iacha."*
> — Jaca, 13 November 1135. The chalice of precious stone and the urceus likewise of precious stone, taken from San Juan to make the king's coinage; three Garcipollera villas granted in perpetual exchange; no return clause. AHN Clero, San Juan de la Peña, leg. 444, no. 257. **VHR.**

The fork: metal can be minted; stone cannot. The last documented custody of vessel No. 2 is the crown's Jaca operation, handler Lope Sangiz. The leading candidate for its fate: **the plain agate foot of the Valencia composite** — the IEA journal records the cup "mounted in the 12th century with an urceus, perhaps used as a naveta, now as the foot." Two stone vessels left San Juan in 1135; the Valencia object fuses two stone vessels in the 1100s. **HYP** — counter: Mafé's 1071 mounting date, which if correct makes No. 2 a different, truly lost vessel (San Juan fires 1494/1675 are the mundane end). The mounting-date technical file decides it.

Class 3 — The hypothesis object (the plain Threshold stone)

The standing claim, recorded as recorded: a stone object from the People of the Threshold; stone like curling-stone rock; activated with water; restores what fables call health or immortality. Status after falsification (5 Oct): the mechanism is **killed as stated** — ailsite is defined by refusing water (≤0.51% absorption); humans carry no tardigrade DNA; no contact-activation mechanism exists. The Antarctic bed at 89.19°S, 110.65°E is 3,208 m of modelled ice over −243 m of modelled bed, with no radar echo within 143 km and a frozen base (−9 °C). **SPC, parked.** Resurrection conditions: a dated corpus document tying the Threshold people to the coordinate; independent ground-truth of the anomaly at that longitude; a drill core with published petrography; contamination-controlled biology; a replicated exposure experiment.

Class 4 — The water-stone motif objects (the pattern class)

Thirty graded instances, 2350 BC → 1932 AD: Horus cippi and healing statues (water poured over inscribed stone, drunk — MMA acc. 50.85); Columba's quartz (Vita Columbae II.33); the Highland dip-stones (Lee Penny and its class); the Prester John mussel-shell stone fountain (1165); Wolfram's lapis exillis (cannot die within the week); the alchemical elixir; Emperor Wu's jade cup (133 BC — the independence control); the Revigator (carnotite-lined crock — the deadly modern echo). Six invariants scored per instance; renewal-with-a-condition never fails. **VHR as pattern; pattern ≠ provenance.**

The assay protocols (what to run on any candidate)

For the curling clause: ailsite's peralkaline fingerprint (riebeckite-arfvedsonite + aegirine + aenigmatite) — XRF + petrography, non-destructive, decisive. For the Valencia-class candidates: agate/chalcedony provenance, Kufic epigraphy, mount metallurgy — and above all the **mounting-date technical file** (Beltrán's 1960 dismount report + cathedral file; UPV 2026 raw data).

WHERE — the geography of the hunt

The corridor (computed, WGS84 great-circle)

Leg	From → To	km	Bearing	Days @100–150 km	Navigability
S1	Alexandria → Gadir/Cádiz	3,383	290°	23–34	Feasible, documented era practice
S2	Gadir → Dublin (direct Atlantic)	1,869	0°	12–19	Feasible, documented (Pytheas)
S3	Bristol → Dublin	328	312°	2–3	Documented hulls 1453/1517
N1	Dublin → Iona	332	358°	2–3	Dál Riata routine
N2	Iona → Maeshowe, Orkney	354	32°	2–4	Cormac, documented
N2b	Orkney → Shetland	173	41°	1–2	Documented
N3	Shetland → Faroes	367	307°	2–4	Landnámabók route; Severin
N4	Faroes → Reykjavík	801	294°	5–8	Norse settlement c. 870; Severin
N5	Reykjavík → Jan Mayen (ice edge)	949	31°	6–10	Reconstructed (Svalbarð 1194; Kingittorsuaq 72°55′N)
—	**Full corridor, 9 legs**	**8,349**	—	—	No leg breaks; return is the easy direction

Cross-checks: Cormac's 14 days north = 1,400–2,100 km at curragh rates — consistent with the Iceland/Jan Mayen ice edge from Iona. Pytheas' "six days north of Britain" = 600–900 km — fits Orkney→mid-Norway (879 km); Iceland (1,144 km) marginal. The ledger logs both Thule candidates and does not choose.

Candidate sites — status after the sittings

Site	Status	Key numbers	Grade
89.19°S, 110.65°E (Antarctic bed)	Parked under resurrection conditions	Surface 2,965 m; bed −243 m; ice ~3,208 m; nearest radar bed echo 143 km; bed frozen (−9 °C)	**SPC**
71.0°N, 29.9°E (Barents point)	Closed — open sea, geometric artefact; antipode scores identically	~33 km off Varanger	**Closed**
Ballynoe (DOW 037:035)	Chamber claims unsupported — 13 m is the cairn's length; no 27.73 Hz dataset	54.290750°N, −5.725842°E	**SPC fails**
Iona	Route node, not object-holder — Thomas archive fully published; no plain stone vessel catalogued	SF 0997 / SF 0962 / SF 1023 class	**VHR negative**
Egypt fit 29.05°N, 30.95°E (Ihnasya area)	Model output with circularity caveats; 398 null runs, min Holm p = 0.330	0.05° grid cells, ~4 km to mission locator	**Not a location claim**

Jaca mint (the fork)	Last documented custody of vessel No. 2	13 Nov 1135; handler Lope Sangiz	**VHR**
San Juan de la Peña	Documentary frontier — 1135 act, 1399 handover, the monastery both loses and holds the stone vessels	AHN leg. 444 no. 257; ACA perg. 136	**VHR**
Valencia Cathedral	The documented composite; the foot is the leading urceus candidate	Capilla del Santo Cáliz; archivist contact ready	**VHR object / HYP identification**
The ice edge (Jan Mayen class)	Northern terminus class of the route — Dicuil's "frozen sea one day north of Thule"	MWP ice edge farther north; 71°N summer-reachable	**HYP**
The Faroes	Strongest unfished material lead — pre-Norse barley/peat-ash layers 4th–8th c., sheep aDNA ~AD 500	Paparøkur/Papurshílsur	**VHR layers**

WHEN — the master timeline

When	What the record shows	Grade
c. 2350 BC	Pyramid Text utterance 378 — anti-snake incantations, the textual ancestor of the healing-stone rite	**HYP ancestor**
c. 1300–1150 BC	Salcombe wreck — Levant tin into Devon; the corridor's first documented cargo class	**VHR excavated**
c. 735–720 BC	Nestor's Cup, Pithekoussai — earliest inscribed power-claim on a drinking vessel; it traveled Rhodes→Ischia	**VHR**
664–343 BC	Horus cippi mass use — water poured over inscribed stone, drunk; Metternich Stela c. 360–343 BC (MMA 50.85)	**VHR**
c. 440–430 BC	Herodotus 3.23 — the Macrobians' longevity fountain; 4.33 — the Hyperborean offerings relay to Delos	**VHR text**
c. 325 BC	Pytheas sails Massalia→Britain→Thule, measuring daylight; the sea-lung at the ice edge	**VHR text**
c. 300 BC	Hecataeus: the island beyond the Celts, priests of Apollo, the spherical temple, the 19-year visit	**VHR text**
133 BC	Emperor Wu's jade-cup immortality rite — the independence control (stopped when it sickened him)	**VHR**
77 AD	Pliny systematizes stone-in-liquid pharmacology (NH 36–37)	**VHR**
563	Columba crosses to Iona — the northern world's founding leg	**VHR**
c. 590s	Cormac: Orkney under protection; then 14 days straight north "beyond the range of human excursion"	**VHR text**
c. 630	Syriac Alexander Romance — the Water of Life in the Land of Darkness; Khidr drinks, Alexander fails	**VHR text**
c. 700	Adomnán writes the Life of Columba — Cormac's voyage and the white-pebble water cure in one book	**VHR**
c. 795	Clerici winter–summer on Thule; the frozen sea one day beyond — the ice edge logged	**VHR**
825	Dicuil writes it down; admits a century of unrecorded hermit occupation, "never found in the authorities"	**VHR**
c. 870	Norse settle Iceland on the same stepping-stones; the papar are gone, leaving books, bells, croziers	**VHR**
1101	The Sacro Catino taken at Caesarea — Islamic green glass, later called a Grail	**VHR object**
1135	**13 Nov, Jaca: Ramiro II takes the stone chalice and stone urceus from San Juan de la Peña for the mint. The urceus's line goes dark.**	**VHR**
1153	Earl Harald's party shelters in Orkahaugr in the Christmas snow	**VHR**
c. 1165	Prester John letter — the youth spring, and the healing fountain in a hollow mussel-shell stone with two keepers	**VHR text (forgery)**
1180s–1210	Chrétien's vessel; Nizami's spring of light; Wolfram's grail becomes a stone that suspends death	**VHR texts**
1307–1308	Templar letters and arrests; Danet in Ireland two days before the orders	**VHR**
1313 / 1316	Itemized Templar movables to royal recipients — chalices, the Venetian cross, the silver boat; no stone vessel	**VHR**
1319	Ad ea ex quibus — Temple to Order of Christ; the corridor's Portugal chapter funded	**VHR**
1322	Jaime II asks the Mamluk sultan for the Cáliz — the crown's own skepticism on record	**VHR**

c. 1330 (legend)	The Lee Penny leaves the Levant for Scotland — the corridor run backward with a healing stone	**HYP legend**
1399	The stone chalice leaves San Juan for the crown, with the "carta del rey" of an unnamed king	**VHR**
1410 / 1437	The composite described as today (Ms. 136); the deposit act; later pledged for ~137,430 sueldos	**VHR**
1453	Julian of Bristol pleads Bristol→Lisbon→Ireland→Plymouth — hides, not relics	**VHR**
1517	Santa Maria of Caudelars sails for Ireland; no Irish arrival record survives (1922)	**VHR**
1629–1847	The Lee Penny's documented cures — rabies, plague, cattle; the 1638 Assembly acquittal	**VHR rite**
1912–1932	The radium-water era — the Revigator's ore-lined crock; Radithor; Eben Byers; the motif's deadliest materialization	**VHR**
1960	Beltrán dismounts the Valencia composite — the plain agate foot examined as a separate vessel	**VHR**
1976–77	Severin sails Ireland→Newfoundland in a leather boat; an ice-hole patched at sea	**DCR**
2026	UPV metrology of the cup (96.44–97.85 mm mouth); these four sittings execute the ledger's open tests	**VHR**
5–6 Oct 2026	The bed read, the falsification, the route logs, the urceus trace, the pattern — consolidated here	**—**

HOW — how it moved, how the claim runs, how to test it now

How it moved

Never as a documented single hull — ledger test #5 found no ship in two legs, and the standing instruction expects none. It moved the way the record shows everything else moving on the corridor: **hand to hand, house to house, era to era** — tin ingots in the Bronze Age, pilgrims from the 12th century, hides and wine in the customs accounts, a king's emergency mint in 1135, a royal request in 1399. The route is a system; the system is documented; the cargo manifest was never going to survive the victors.

How the claim runs — and the physics verdict

The claim: stone + water → health/immortality. The pattern memo traces that exact claim-shape for 4,300 years. The physics verdict stands: curling-stone ailsite is defined by *refusing* water; the "activation" clause inverts it; the biology clause has no mechanism and no human tardigrade DNA to activate. What survives the falsifier is not the mechanism but the **shape of the story and the trail of the objects** — and the resurrection conditions are written down, so if the day comes, the test is ready.

How to test it now — the live list, ranked

#	Test	Decides	Route
1	The mounting-date technical file on the Valencia foot (Beltrán 1960 dismount report; UPV 2026 raw data)	Whether the urceus = the foot (postdates 1135) or No. 2 is a lost vessel (1071)	Valencia cathedral archivist — V. Pons Alós
2	ACA reg. 2242, f. 171 — the 1399 "carta del rey"	The unnamed royal donor; possibly names both vessels	ACA — request drafted (Appendix)
3	ACA Ms. 136 (1410 inventory) full collation	Any separate stone pitcher listed apart from the composite	ACA / PARES
4	AHN leg. 444, no. 257 parchment autopsy	The 40/50 variant; any vessel description in margins	AHN reproduction service — drafted
5	VRTI line-by-line read of TNA E 101/239/11 (Irish Templar goods 1308)	Any stone vessel in the Irish lists that Mac Niocaill's summary omitted	Virtual Treasury — drafted
6	Faroes pre-Norse layers — targeted excavation-literature review	The strongest material lead on the whole northern corridor	desk-executable; then Faroese heritage bodies
7	Assay protocols ready: ailsite XRF/petrography (curling clause); agate/Kufic/mount metallurgy (Valencia class)	Any physical candidate, the day one surfaces	any materials lab

Appendix — the archive requests (drafted; sending is the owner's decision)

A1. AHN — reproduction of Clero, San Juan de la Peña, leg. 444, no. 257 (full recto/verso, endorsements; the 40/50-mark collation). A2. ACA — reg. 2242 f. 171 (29 Aug 1399; the "carta del rey"); plus PARES confirmation for Extrainventario 338. A3. Virtual Treasury of Ireland — fullest transcription/images of TNA E 101/239/11, attention to any stone vessel entry. A4 (new). Valencia cathedral archive — the 1960 Beltrán dismount documentation and the foot's technical file; the 1437 deposit entry (vol. 3532, f. 36v); the UPV 2026 metrology raw mesh and uncertainty budget. Full texts of A1–A3 sit in Master Ledger v2, Appendix A (5 Oct 2026).
